

LYON PARC AUTO

A unified system dedicated to the safety and security of car parks and users

As Lyon's longstanding car park operator, LPA manages and operates underground car parks and is a key player in the development of urban mobility. Identified as public establishments, these car parks must meet the **regulatory standards** for **buildings classified as "establishment open to the public"**.

Upgrading the existing BMS system, so that several remote sites can be aggregated into the same HMI.

1. Have a monitoring tool that allows you to react effectively to incidents.
1. To be able to integrate new equipment and new fleets into the application.
2. Meet regulatory standards in terms of fire safety, ventilation, CCTV, etc.

Integrated by SEMERU

PLATINUM

Key figures

- 6.5M users/year
- 19.036 parking spaces
- SCADA for 6 car parks:
 - 5 underground sites
 - 1 elevated site
- 1 control-command station
- 4 local operating stations
- 24/7 agent presence

Implementation

- To bring the field operations in line with the safety and security regulations, LPA has chosen the Panorama SCADA platform for all 6 of its car parks.
- The SCADA application was developed right from the design stage based upon feedback from agents in the field.

A centralised solution for a 360° vision

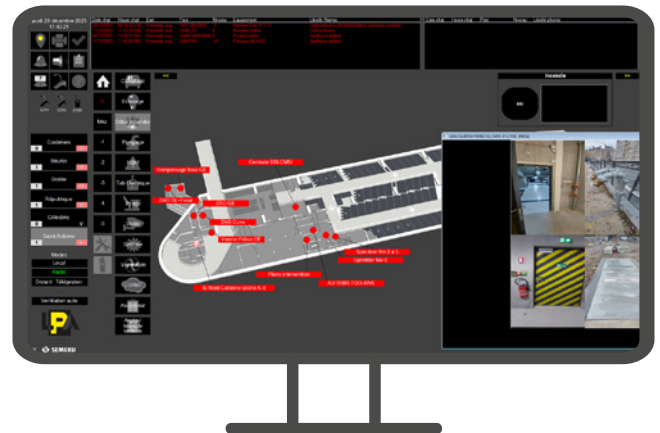

All the varied data from the BMS and safety and security systems is fed into the centralised application:

- Fire detection (SSI),
- Lighting: automated system (DALI com protocol),
- Underground structures: monitoring of pumping stations (flow rate, groundwater level),
- Main LV board and energy meters: circuit-breakers,
- Barriers and access control:
 - I/O operating status,
 - ticket management and self-checkouts,
- CCTV: identifying the flow of people,
- Intercom: instant voice and visualisation,
- Ventilation: state of the circulating air,
- Gas detection: reading of carbon monoxide levels (in compliance with thresholds),
- Lifts: emergency call and status information.

Benefits

- Unified vision for improved agent responsiveness
- Scalable application to continue meeting the city's mobility challenges
- Contributing to the safety of car park users in Lyon.

Panorama software is our eye on all our car park facilities. The solution enables us to prioritise technical alarms to guarantee the protection of vehicles and people.
